Palash Pawar

832.515.2271 | palash.pawar@utexas.edu | linkedin.com/in/palash-pawar | github.com/palashpawar

Education

The University of Texas at Austin Austin, TX
Bachelor of Science in Statistics & Data Science *May 2028*
Relevant Coursework: Data Structures & Algorithms, Probability & Statistical Inference, Sports Analytics, Data Visualization, Databases & SQL, Linear Algebra, Machine Learning, Geospatial AI

Technical Skills

Languages: Python, R, SQL
Platforms: Databricks, Snowflake, AWS, GCP, Git, Looker, Power BI, Tableau, Excel, PyTorch, TensorFlow
Techniques: Quantitative Analysis, Regression, Classification, NLP, LLMs, Computer Vision, A/B Testing

Experience

Business of Sports Institute at McCombs October 2026 – Present
Sports Analytics Researcher
- Working on sports analytics projects with Texas Athletics

JPMorganChase October 2026
Data For Good Participant (Client: National Basketball Players Association)
- Built a fixed-effects model on 60K NBA games showing back-to-backs cut win odds ∼6%, validated with XGBoost
- Shipped CourtSide, a D3.js dashboard with an LLM chatbot revealing up to 1.8-win gaps in NBA schedules

Dell Medical School August 2026 – Present
Undergraduate Research Assistant (Virostko Lab)
- Conducting medical research by analyzing multimodal data to identify patterns associated with Type 2 Diabetes

Databricks June 2026 – August 2026
Data Engineer Intern (Platform Engineering)
- Architected a Databricks Lakehouse, integrating 3 sources and reducing data latency across 18 production tables
- Designed PySpark ETL pipelines with Delta Lake and Lakeflow orchestration, improving efficiency by 75%

American Airlines August 2025 – January 2026
Data Scientist Intern
- Built predictive time series models for flight arrival delay forecasting, improving accuracy ∼15% over baselines
- Analyzed 2M+ flight records and conducted exploratory data analysis (EDA) with data cleaning and preprocessing
- Optimized feature engineering, hyperparameter tuning, and model validation to increase predictive accuracy

Projects

Kalshi Earnings Mentions Bot | *Claude Code, GCP Compute, SQLite, Kalshi API, SciPy, statsmodels, launchd*
- Backtested a systematic alpha across 5.19M Kalshi earnings-mention contracts (+4.1¢/contract alpha, t = 1.95)
- Built a 3-mode trading execution engine with risk-gating, scanning 850 instruments / 250K API calls per day
- Engineered a Google News sentiment filter, Nasdaq earnings-calendar features, and DuckDB/SQLite tick pipelines

SPY Volatility Surface & Options Market Maker | *NumPy, SciPy, pandas, yfinance, pytest, scikit-learn*
- Built a SPY options market-making system with pricing, Greeks, implied-volatility surfaces, and real-market data
- Developed relative-value signals with inventory-aware quoting, transaction costs, and dynamic delta hedging
- Evaluated with walk-forward testing, achieving a 1.4 Sharpe Ratio and 18% higher risk-adjusted P&L

Moneyball 2.0: Analyzing Value in the Global Soccer Transfer Market | *tidyverse, caret, ggplot2*
- Built an end to end pipeline modeling player market value, engineering 30+ advanced performance features
- Performed residual based analysis to identify overvalued and undervalued players across leagues and positions

Activities & Interests

Activities: IM Soccer, Texas Dhoom (Bollywood Fusion Dance Team), Stats & Data Science Directed Reading Program
Interests: Soccer, Financial/Commodity Markets, Algorithmic Trading, College Football, Traveling, Card Games
